

Frank Cox, Price, has learned to seal and polish cedar wood, using it to make many beautiful items.

Useful, Lucrative Pastime

Found Some Cedar, Developed A Hobby

PRICE—Frank Cox, 148 W. 2nd North, was fascinated 10 years ago by a flat piece of cedar wood and has since

wired it to fashion a table lamp.

He has now made more than 20 such lamps, learning much about sealing and scraping the cedar wood to make it more attractive.

Now he is branching out into more ambitious and time-consuming endeavors.

His latest effort is a modern-

Production Hits Record

processing and all hay," the report said.

Above average yields were recorded in other Idaho crops. Fruit crops, with the exception of sweet and sour cherries, were larger than last year with most showing average production.

Well above normal rain and snow fall during April and May delayed field work but greatly improved water supplies, the Agriculture Department said. Following cool summer temperatures, there were above normal readings in September and October which favored crop development.

The first killing frost did not occur until Oct. 24, an unusually late date.

All wheat production in Idaho during 1963 was estimated at 38,502,000 bushels, four per cent above last year but five per cent

below the 1957-61 average. Late summer potato production was 3,250,000 hundredweight, 18 per cent above last year and 442,000 hundredweight above the previous record production of 2,808,000 set in 1959. Yield of 260 hundredweight per acre equaled a record.

The fall potato crop of 52,200,000 hundredweight was 8,625,000 hundredweight above the previous year.

Idaho hay production was 3,229,000 tons. This was five per cent above last year and the 1957-61 average. A new record of 28,612,000 bushels was set in barley production. There was a record yield of 46 bushels per acre of barley.

A record oats yield of 57.5 bushels per acre pushed Gem state oat production to two per cent above 1962 despite a drop in acreage of 6,000.

Hatfield For Post

WASHINGTON (UPI) — Gov. Mark Hatfield of Oregon is among those being considered for the job of permanent chairman of the 1964 republican national convention.

GOP National Chairman William E. Miller confirmed Sunday that Hatfield had been proposed for the post, traditionally held by the Republican House leader.

turned that fascination into a useful and lucrative hobby. From the flat piece of wood which he rooted out of an eroded wash in a canyon about 15 miles east of here, the enterprising Mr. Cox built a base, put a metal rod through it, and Sunny-side, Carbon County.

Is on! That means

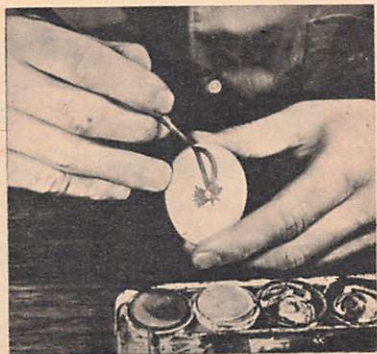

DISPLAY of up-ended eggs hanging by threads brightens up Danish artist's flat.

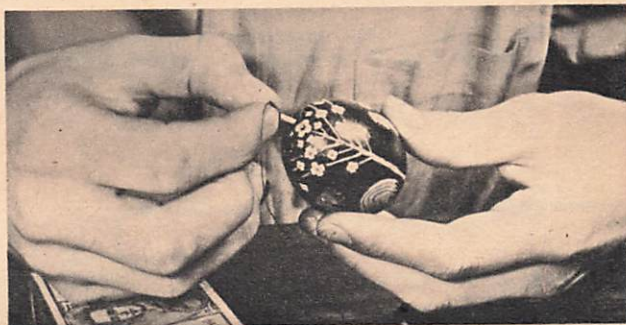

BLOWING EGG; holes are pin pricks enlarged with a nail.

GO PAINT AN EGG

TINY BRUSH is used for the simple and colorful egg designs.

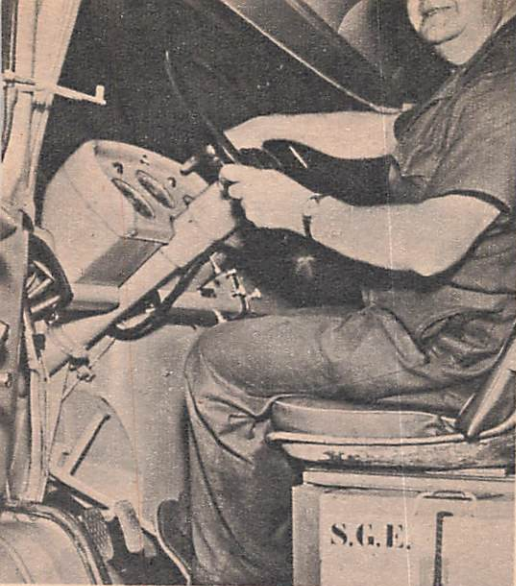

SINCE he started painting fancy eggs as a hobby, lithographer Gunnar Petersen of Copenhagen, Denmark, has had so many requests for these pretty knick-knacks that he decided there was only one defense—teach his friends to make their own. So here are his instructions, illustrated with photos of himself at work. All you need to start is an egg, a pin, a nail and a set of water colors. The finished eggs are quaintly pretty and make very welcome presents. •

THREAD is tied to bit of match inside egg.

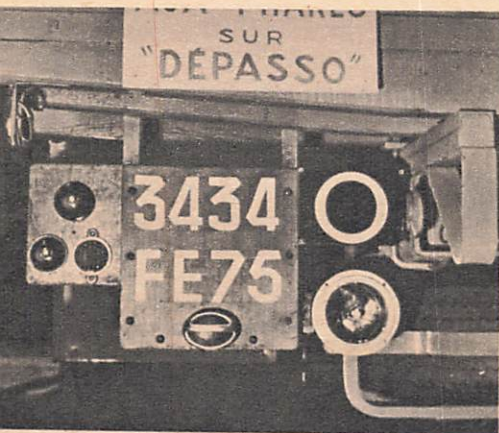

PASSING FANCY

The French have a word for it—Depasso. It helps cars pass trucks safely on road.

FLASHING LIGHT, bell or both in cab tells truck driver motorist behind wants to pass.

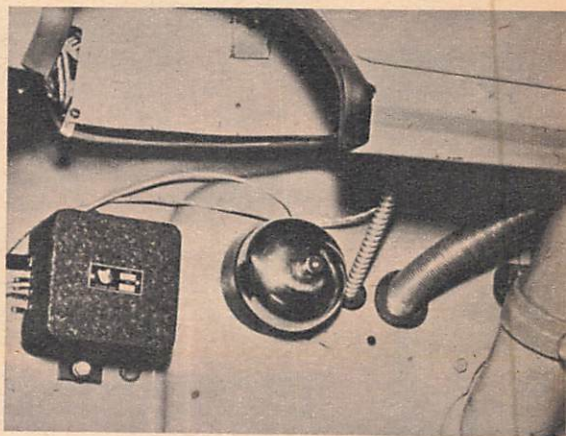

PHOTOELECTRIC cell is directly below sign indicating truck has the Depasso system.

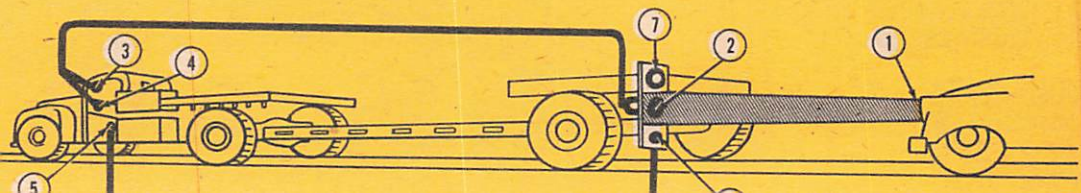

HOW IT WORKS. 1. Car's lights shine on the photoelectric cell, 2; Bell, 3, or light, 4,

THE French call it the Depasso, a new method whereby motorists can pass trucks safely on the highway. The system consists of a photoelectric cell mounted on the back of the truck. When a motorist wants to pass he shines his headlights on the cell. A signal is flashed to the truck driver via bell and/or lights on his dash. If the road ahead is clear, the truck driver lights up a safe green. If not, a danger red light is flashed on the truck's tail. C'est bon! •

BELL in cab. French police may make the Depasso system obligatory for all trucks.

alerts trucker. He presses button, 5, lighting green, 6, or red light, 7, for motorist in rear.

Turns Cans Into Art

By FLO MUNSON

Deseret News Correspondent

FIELDING, Box Elder County — Junk to some people, tin cans are undeveloped art to E. W. Sutherland, president of the Fielding Town Board.

Mr. Sutherland can make an attractive wall plaque, a colorful medallion or a peacock. Just give him the cans and the tools.

The majority of his work is given away as gifts. Many people from New Jersey to California have his handiwork displayed in their homes.

Mr. Sutherland first became interested in his hobby when he visited his sister - in - law at Brigham City and noticed an ornament on her wall. He examined it closely and upon returning home tried his skill. He was successful and he has since spent many leisure hours making the ornaments.

Mr. Sutherland was born at State Line, Miss. At the age of seven years he, along with his family moved to Gooding, Idaho. He also spent a number of years at Pocatello and Soda Springs, Idaho.

In 1921 he married Alene Sainsbury and they established a permanent home at Fielding.

E. W. Sutherland shows butterfly and peacock he made by carefully snipping and decorating ordinary tin cans.

They are the parents of four sons and one daughter.

Mr. Sutherland is a retired auto mechanic. He worked with the Box Elder County Road Department for 18 years. He has served as president of the town board for the past two years.

Mr. Sutherland proudly states that "I've made over 200 of these ornaments. I certainly enjoy having some way to spend the long evenings especially during the winter season." He urges other men who have retired to take up a hobby such as his.
